(703) 625-6795 | Yusefshamad@gmail.com | Falls Church, VA | [LinkedIn](#) | [Portfolio](#)

EDUCATION

George Mason University – Fairfax, VA

Graduated: May 2025

B.S. in Computational Data Science and Biology

Relevant Coursework: Data Mining, Data Visualization, Machine Learning, Simulation, Databases, Computational Programming

SKILLS

Professional Skills: Data Analysis | Business Intelligence | Data Visualization | Forecasting & Demand Planning | KPI Dashboard Development | Operational Analytics | Process Optimization | Data-Driven Decision Making | Financial & Operational Reporting | Business Strategy Support | Team Leadership

Technical Skills: Python | SQL | SQLite | R | MATLAB | C | pandas | statsmodels | Streamlit | Claude API | LLM Application Development | Prompt Engineering | Tableau | Microsoft Excel | Time Series Forecasting | Machine Learning | Exploratory Data Analysis (EDA) | Statistical Analysis | Data Cleaning & Preprocessing | Git

PROFESSIONAL EXPERIENCE

AI/Technology Intern, De Lune Corp | Springfield, VA

July 2026 – August 2026

Worked the full federal contracting cycle at an SBA 8(a) certified cybersecurity and IT modernization contractor, using AI tools across research, proposal writing, and solution development.

- **Proposal Development:** Researched and drafted technical proposal content for cybersecurity and IT modernization solicitations, using Claude to accelerate requirements analysis and writing.
- **AI-Powered MVP:** Contributed to building an AI-driven MVP addressing a federal use case, presenting outputs to leadership for review.
- **Opportunity Research:** Supported discovery and qualification of federal solicitations aligned to company capabilities across cyber, cloud, and IT modernization.
- **Cross-Functional Collaboration:** Partnered with capture and technical leads to align proposal content with solicitation requirements and win themes.

Assistant Manager, Barista, Dolcezza | Fairfax, VA

Feb 2025 — Present

Support daily operations and inventory planning for a local coffee shop while applying data analysis and forecasting techniques to improve operational efficiency.

- **Inventory Forecasting:** Built an Excel-based inventory tracking and forecasting system that reduced shortages and improved ordering accuracy.
- **Sales Data Analysis:** Analyzed transaction data to identify peak demand periods, enabling staffing adjustments that improved service speed.
- **Team Leadership:** Supervised and trained employees to maintain efficient operations and consistent customer service standards.
- **Customer Experience:** Built rapport with regular customers and resolved service issues on the spot, supporting repeat business.

Operations Coordinator, BLS (Bethany Limo Group) | Washington, DC

April 2021 — January 2024

Managed day-to-day dispatch and operations for a limousine and travel services company for three years, while also applying data analysis to support business decisions.

- **Dispatch & Scheduling:** Coordinated driver dispatch and ride scheduling to ensure on-time pickups and efficient fleet utilization across peak travel periods.
- **Demand Forecasting:** Built Excel and Python-based forecasting models to predict ride demand, supporting more efficient fleet deployment and scheduling.
- **Revenue & Pricing Analysis:** Analyzed historical booking and revenue data to identify high-margin routes and time slots, informing pricing strategy adjustments.
- **Customer Service:** Served as the primary point of contact for client bookings and issue resolution, maintaining service quality and client retention.
- **Operational Reporting:** Compiled recurring reports summarizing key business metrics for management review.

PROJECTS

RetailPulse – Demand Forecasting & Operations Analytics | [GitHub](#)

August 2026

- **Forecasting Model:** Built a Holt-Winters time-series model forecasting daily demand across 3 locations, achieving 6.6% MAPE — a 22.9% reduction in error versus a seasonal-naïve baseline, validated with rolling-origin backtesting.
- **Operational Application:** Translated forecasts into a staffing model converting projected demand and 95% confidence bounds into daily headcount recommendations.
- **Interactive Dashboard:** Developed a Streamlit dashboard with KPI tracking, location performance, and demand-pattern analysis; identified the smallest location as the fastest-growing at +14.7% YoY.

AskData – Natural-Language Analytics Copilot (Claude API) | [GitHub](#)

August 2026

- **LLM-to-SQL Pipeline:** Built a tool using the Claude API that converts plain-English business questions into validated SQL over a multi-table database, returning results, charts, and written interpretations.
- **Security Guardrails:** Designed a validation layer treating model output as untrusted input — whitelisting SELECT statements, blocking stacked queries and injection attempts, and executing read-only; verified by a 21-case security test suite.
- **Evaluation Harness:** Created an execution-based benchmark of 12 questions graded easy/medium/hard that scores generated SQL on result-set correctness rather than string matching.
